SUMMARY

Motivated and detail-oriented Data Analyst with a strong foundation in data cleaning, analysis, and visualization, passionate about transforming raw data into meaningful insights that support informed decision-making. Proficient in SQL, Excel, Python, and data visualization tools, with hands-on experience in exploratory data analysis and reporting. Backed by solid programming fundamentals in C, C++. Possesses working knowledge of HTML, CSS, and JavaScript, supporting dashboard development and data-driven web interfaces.

EDUCATION

Vellore Institute Of Technology

Bachelor's In Technology - Electronics and Communication

Chennai, India

2022 – 2026

TECHNICAL SKILLS

Languages: Python, SQL, C, C++, HTML, CSS, JavaScript

Developer Tools: Power BI, Tableau, Excel, GitHub, VSCode, Canva

PROJECTS

➤ HR Analytics & Employee Attrition Intelligence Platform

[GitHub](#)

- Developed an end-to-end HR analytics solution using Python, XGBoost, SHAP, and Power BI to analyze and predict employee attrition patterns.
- Built a machine learning model to identify major attrition drivers such as overtime, salary, age, and job satisfaction, followed by explainable AI analysis using SHAP.
- Designed an interactive Power BI dashboard featuring KPI monitoring, department-wise attrition analysis, salary insights, and dynamic business filters.

➤ Real-Time Indian Stock Market Pipeline & Anomaly Detection System

- Engineered an end-to-end real-time data pipeline using Apache Kafka, PostgreSQL, and Docker to process live Indian stock market data.
- Implemented machine learning-based anomaly detection and automated alerting for abnormal market activity.
- Developed a live analytics dashboard featuring real-time stock tracking, interactive visualizations, and streaming data insights.

➤ Deepfake Detection using Spatial-Frequency Fusion Model

- Developed a deep learning-based deepfake detection system using Swin Transformer, CNN, and FFT-based frequency analysis to identify manipulated images.
- Implemented spatial-frequency feature fusion and achieved ~91% accuracy in detecting subtle image manipulations.
- Built a complete pipeline including preprocessing, FFT transformation, model training, evaluation, and inference using PyTorch and OpenCV.

CERTIFICATIONS

SQL and Relational Database - IBM

Android App Development - Imarticus
